## OVERVIEW

A device that helps revitalize the brain and improve cognitive impairment by providing cognitive training contents necessary for daily life for the purpose of training and treatment for patients with moderate and advanced cognitive impairment. Currently, it is widely distributed in rehabilitation hospitals and general hospitals nationwide, and in particular, therapists analyze users' training patterns and provide detailed cognitive training analysis results.

## Software

## Feature

- ✓ This program is configured to solve problems using the touchscreen with visual and intuitive judgment.
- ✓ All problems are simple pictures and contents, which are suitable for the elderly with middle and high cognitive impairment.
- ✓ This program is designed to enable users to train a variety of cognitive stimuli through step-by-step training preferences.
- ✓ This Program is designed to allow therapists to analyze the user's treatment, training, and usage patterns through user training and treatment results to establish a treatment plan that is appropriate for the user
